Zentura – harmonious design

We specialize in creating premium garden decorations, including corten steel items such as planters, borders, panels, and fireplaces. Our products seamlessly combine durability with aesthetic appeal, and thanks to our personalized approach, they can be customized to meet the unique requirements of each client.

The corten steel used in our projects is notable for its enhanced corrosion resistance, ensuring not only durability but also a distinctive look. We collaborate with a diverse clientele, ranging from individual customers to professionals such as landscape architects, designers, and companies specializing in green space design.

We offer an extensive range of solutions that can be tailored to specific design requirements, using various types of steel and wood. Every product is crafted with a focus on functionality, durability, and aesthetics, allowing it to integrate seamlessly into contemporary garden environments.

Orders

At the customer's request, most of our products can be manufactured in nonstandard dimensions. Each such order is evaluated individually—simply submit a request for a quotation.

Products such as shelves or flower pots can be designed in both closed and open versions (e.g., with or without a bottom in the case of flower pots; with or without a back panel in the case of shelves), according to their intended purpose.

Upon request, we can also equip our products with adjustable feet for leveling or with sets of wheels to make rearranging your decor effortless.
